## Photography

High resolution giclee ink-jet printing is an excellent choice for photographers wanting to create single or multi-sized reproductions from digital files.

Giclee prints have exceptional archival and aesthetic qualities, in addition to the economic benefits to the photographer, with print runs starting at a single print. Using acid-free fine art and photographic papers, pigment inks sets and special UV coatings these prints have a display life that can exceed 100 years in ideal conditions. Traditional photographic prints have a lifespan of 20 years.
